Dryland	

About This Report

Ten sections detail the 2015 spring barley experiments across Montana. Each section begins with a statewide summary graph sorted by yield rank, with other quality traits stacked above. Following this, a summary table displays the means of each line across the state. Lastly in each section, tables show the means for every individual location where the experiment was grown.

Intrastate and Yield Trials are in a lattice design, with means adjusted accordingly. Yield is corrected to 13% moisture and based on a 48lb bushel. Hull-less barley does not have a standard bushel weight. For this trial yield is expressed in both pounds/acre as well as the 48lb bushel/acre unit used for other classes of barley.

Index Scores:

This number gives a score for each entry. This is a weighted value for a combination of agronomic traits contributing to malt quality. The index score replaces the traditional comparison to a single control variety, based on yield alone. The formula is:

$$(\text{Yield} \times 0.45) + (\text{Plump} \times 0.25) + (\text{Protein} \times -0.25) + (\text{Test Weight} \times 0.05)$$

$$\text{For Hull-less } (\text{Protein} \times 0.25)$$

In future years we may also develop indices for:

- **Malt Quality**
- **Forage Quality**
- **Feed Barley**

If you have any questions about this report please contact liz.elmore@montana.edu

2015 Montana Barley Statistics

Statewide Production

BARLEY - ACRES PLANTED	970,000
BARLEY - ACRES HARVESTED	850,000
BARLEY - PRODUCTION, MEASURED IN BU	44,200,000
BARLEY - YIELD, MEASURED IN BU / ACRE	52

Prices

BARLEY, MALTING - PRICE RECEIVED, MEASURED IN \$ / BU	5.94
BARLEY, FEED - PRICE RECEIVED, MEASURED IN \$ / BU	2.56
